ENVIRONMENT

Subject:
September 2008 Groundwater Sampling Event
Ford Twin Cities Assembly Plant, St. Paul, Minnesota

Date:
December 31, 2008

Cc:

in St. Paul, Minnesota (see Figure 1).
conducted in accordance with the
control Agency (MPCA) Voluntary
and the Petroleum Brownfields Program
ampling Plan (FSP) developed for the TCAP
Groundwater Sampling Events and Annual
Large Monitoring Work Plan.

Our ref:
MN000593.0003

at the Twin Cities Assembly Plant (TCAP)
Groundwater monitoring at the TCAP was
requirements of the Minnesota Pollution
Investigation and Cleanup (VIC) Program
(PBP), as well as the June 2007 Field Sa
and the December 2007 Quarterly Groun
Underground Storage Tank (UST) Discha

Site Location

The TCAP is located at 966 South Mississippi River Boulevard in St. Paul, Ramsey County, Minnesota at the approximate easting coordinate 484562.5 meters (m) and northing coordinate 4973822.5 m. The TCAP is located in a mixed industrial-, commercial-, and residential-use area on the eastern shore of the Mississippi River, south of Ford Parkway and west of South Cleveland Avenue, in St. Paul, Minnesota (see Figure 1).

ippi River Boulevard in St. Paul, Ramsey
sting coordinate 484562.5 meters (m) and
AP is located in a mixed industrial-,
the eastern shore of the Mississippi River,
River Boulevard, south of Ford Parkway and
aul, Minnesota (see Figure 1).

Imagine the result

Monitoring Well Network

A network of 15 groundwater monitoring wells located at the TCAP was sampled during the monitoring event. Groundwater elevations and samples were collected from these wells to characterize each of the saturated zones as indicated in the table below:

Unconsolidated Soils Perched Water (Shallow Saturated Zone)	Platteville Limestone (Intermediate Saturated Zone)	St. Peter Sandstone (Deep Saturated Zone)
MW-4	AMW-01	AMW-03B
MW-5	AMW-02	AMW-05
MW-6	AMW-03A AMW-04 AMW-06 AMW-08 AMW-09 AMW-10	AMW-05B AMW-07

The monitoring well construction details are summarized in Table 1, and the well locations are shown on Figure 2. The following sections of this report summarize the procedures followed and the analytical results from this groundwater sampling event.

Groundwater Sampling Procedures

Water-Level Measurements

On September 10, 2008, site-wide groundwater elevation levels were measured at the monitoring wells using an electronic water-level indicator in accordance with procedures outlined in the FSP. These levels were measured to the nearest 0.01 foot. Groundwater elevations were calculated using surveyed top-of-well casing elevations. The water-level indicator was cleaned between each well using a detergent solution and rinsed with clean distilled water prior to deploying it into the next monitoring well. The water-level data were used to calculate purge volumes and

evaluate groundwater gradients and flow directions where applicable. Groundwater levels for Monitoring Well AMW-05 could not be determined because the well did not contain water during this monitoring event. A summary of water levels and groundwater elevations collected to date are presented in Table 2. A copy of the water sample logs are provided in Appendix A.

Unconsolidated Soils Perched Groundwater

No evidence exists of a continuous water body within the unconsolidated soils at this site. Isolated areas of perched water are likely located throughout the area and vary in thickness and extent. These factors are affected by the surface topography, ability to receive rainwater infiltration, and bedrock topography. During the site-wide water-level monitoring event conducted in September 2008, groundwater was observed at depths ranging from 2.45 to 4.81 feet below ground surface (bgs) at elevations from 825.35 to 825.92 feet above mean sea level (amsl). From the data collected to date at the site, the perched groundwater observed in the unconsolidated soils is discontinuous.

Platteville Limestone Groundwater

Based on the data collected during this monitoring event, groundwater was present in the Platteville Limestone at depths ranging from 15.72 to 79.67 feet bgs at elevations from 778.72 to 794.37 feet amsl. The Platteville Formation is a dolomitic limestone, with water movement generally controlled by fractures, joints, and bedding planes. Groundwater migration through these structural features cannot be reliably evaluated using water-elevation measurements.

St. Peter Sandstone Groundwater

Based on the data collected during this monitoring event, groundwater was present in the St. Peter Sandstone at depths ranging from 30.29 to 100.86 feet bgs at elevations from 690.49 to 711.07 feet amsl. Monitoring Well AMW-05 did not contain water. Based on the data from the three wells that contained water, the apparent direction of groundwater flow was west toward the nearby Mississippi River (see Figure 3).

Underground Storage Tank Site Monitoring

UST collection system discharge samples were collected on October 2, 2008. Samples were collected from the sampling port on the discharge line of the collection

system. The sample was submitted for analysis of volatile organic compounds (VOCs). Following the sample collection, water-quality parameters were measured for specific conductivity, temperature, pH, and oxidation/reduction potential using a multi-parameter water-quality monitor and a pH meter. The field water sampling log is provided in Appendix A. The UST collection system monitoring results are summarized in Tables 3 and 6.

Groundwater Sample Collection

Groundwater samples were collected on September 11, 12, 15 and 16, 2008. Based on the observed water level and total well depth for a given well, approximately three well volumes were purged prior to collecting a water sample. Monitoring Wells AMW-01, AMW-02, AMW-03A, AMW-04, AMW-06, AMW-07, AMW-08, AMW-09, and AMW-10 were purged and sampled using disposable bailers and nylon rope or a check valve and disposable tubing. Monitoring Wells AMW-03B and AMW-05B were purged and sampled using a submersible pump and disposable tubing. The submersible pump was decontaminated prior to its first use and after use in each well by circulating a detergent solution through the pump, followed by two distilled water rinses. New tubing was used in each monitoring well and was disposed when sampling was complete. Because insufficient water was present at the time of sampling, Monitoring Well AMW-05 could not be sampled.

Immediately following sample collection, groundwater field parameters, including specific conductivity, temperature, pH, dissolved oxygen, and oxidation/reduction potential, were measured at each well using a multi-parameter water-quality monitor. Groundwater field parameter measurements are presented in Table 4.

Groundwater samples were collected into laboratory-supplied containers and submitted with appropriate chain-of-custody documentation to TestAmerica of North Canton, Ohio. Groundwater samples collected from Monitoring Wells AMW-01, AMW-02, AMW-03A, AMW-03B, AMW-04, AMW-05B, AMW-07, AMW-08, AMW-09, and AMW-10 were submitted for analysis of VOCs using United States Environmental Protection Agency (USEPA) Method 8260, semi-volatile organic compounds (SVOCs) using USEPA Method 8270, Resource Conservation and Recovery Act (RCRA) metals (dissolved) using USEPA Method 6010, polychlorinated biphenyls (PCBs) using USEPA Method 8082, and diesel range organics (DRO) and gasoline range organics (GRO) using the Wisconsin Modified Method. Monitoring Wells AMW-06, MW-4, MW-5, and MW-6 could not produce sufficient sample volume to allow analyses for all parameters. The groundwater sample collected from Monitoring Well AMW-06 was submitted for analysis of only

VOCs, SVOCs, RCRA metals (dissolved), DRO, and GRO; the groundwater sample collected from Monitoring Well MW-4 was submitted for analysis of only VOCs and GRO; the groundwater sample collected from Monitoring Well MW-5 was submitted for analysis of only VOCs and GRO; and the groundwater sample collected from Monitoring Well MW-6 was submitted for analysis of only VOCs, SVOCs, and GRO.

Samples for dissolved metals analyses were field filtered in accordance with the FSP. Following the December 2007 sampling event, it was determined that there was no need to collect and analyze both filtered and unfiltered samples for metals analyses. Thus, only filtered (dissolved) metals analyses were required for this monitoring event.

In accordance with the FSP, quality assurance/quality control (QA/QC) samples (duplicates, field blanks, trip blanks, and matrix spikes/matrix spike duplicates) were collected and analyzed. The QA/QC protocols meet or exceed the standards of care required by the State of Minnesota and by Ford. Level 4 QA/QC was completed on 10 percent of all samples collected. The sample analyzed at Monitoring Well AMW-01 underwent a Level 4 validation, and all other samples underwent Enovis verification.

Groundwater Sampling Results

Groundwater sample analytical results were compared to the Minnesota Department of Health (MDH) Health Risk Limits (HRLs)/USEPA Maximum Contaminant Levels (MCLs). The groundwater analytical results are summarized in Table 5. The laboratory analytical reports are provided in Appendix B.

Trip Blank and Equipment Blank Sample Results

During the September 2008 quarterly groundwater sampling event, 12 trip blanks and one equipment blank were submitted to the laboratory for analysis. The trip blanks and equipment blank data were reviewed during verification and validation for conditions that may impact the quality of the analytical results for groundwater samples collected during the sampling event.

Analytical Results – Unconsolidated Soils Perched Groundwater

Monitoring Wells MW-4, MW-5, and MW-6 are completed into the perched groundwater within the unconsolidated formation. Monitoring Wells MW-4, MW-5, and MW-6 were sampled for VOCs, SVOCs, RCRA metals (dissolved), PCBs, DRO,

and GRO. As indicated previously, Monitoring Wells MW-4, MW-5, and MW-6 could not produce sufficient sample volume to allow analyses for all parameters. Monitoring Wells MW-4 and MW-5 were sampled for VOCs and GRO, and Monitoring Well MW-6 was sampled for VOCs, SVOCs, and GRO.

No analytes were detected at concentrations exceeding the HRLs in the unconsolidated formation groundwater samples collected during this sampling event. The following text summarizes the analytes that were detected.

Semi-Volatile Organic Compounds

The constituent bis(2-ethylhexyl)phthalate was detected in Monitoring Well MW-6 at an estimated concentration of 0.93 micrograms per liter ($\mu\text{g/L}$), which is less than the HRL. Note, however, that bis(2-ethylhexyl)phthalate was detected in the equipment blank, and thus, its presence in the sample could be a result of cross-contamination.

Analytical Results – Platteville Limestone

Platteville Limestone Monitoring Wells AMW-01, AMW-02, AMW-03A, AMW-04, AMW-08, AMW-09, and AMW-10 were sampled and analyzed for VOCs, SVOCs, RCRA metals (dissolved), PCBs, DRO, and GRO. As indicated previously, Monitoring Wells AMW-06 could not produce sufficient sample volume to allow analyses for all parameters. The groundwater sample collected from Monitoring Well AMW-06 was submitted for analysis of only VOCs, SVOCs, RCRA metals (dissolved), DRO, and GRO. Figure 4 highlights the constituents that previously exceeded the HRLs, along with their detected concentrations in individual wells from the past four sampling events (July 2007, December 2007, March 2008, and September 2008).

No analytes were detected at concentrations exceeding the HRLs in the Platteville groundwater samples collected during this sampling event. The following text summarizes the analytes that were detected.

Volatile Organic Compounds

The constituent 2-butanone (MEK) was detected in Monitoring Well AMW-02 at an estimated concentration of 0.57 $\mu\text{g/L}$, in Monitoring Well AMW-04 at an estimated concentration of 1.2 $\mu\text{g/L}$, and in Monitoring Well AMW-06 at an estimated concentration of 0.61 $\mu\text{g/L}$; these concentrations are less than the HRL.

Carbon disulfide was detected in Monitoring Well AMW-02 at an estimated concentration of 0.33 µg/L, in Monitoring Well AMW-04 at an estimated concentration of 0.3 µg/L, and in Monitoring Well AMW-09 at an estimated concentration of 0.54 µg/L; these concentrations are less than the HRL.

The constituent cis-1,2-dichloroethene was detected in Monitoring Well AMW-03A at an estimated concentration of 0.4 µg/L, which is less than the HRL.

Semi-Volatile Organic Compounds

The constituent bis(2-ethylhexyl)phthalate was detected in Monitoring Well AMW-01 at an estimated concentration of 0.98 µg/L, in Monitoring Well AMW-04 at an estimated concentration of 1.4 µg/L, in Monitoring Well AMW-06 at an estimated concentration of 1.6 µg/L, and in Monitoring Well AMW-10 at an estimated concentration of 1.5 µg/L; these concentrations are less than the HRL.

Resource Conservation and Recovery Act Metals (Dissolved)

Barium was detected in Monitoring Well AMW-01 at an estimated concentration of 111 µg/L, in Monitoring Well AMW-02 at an estimated concentration of 117 µg/L, in Monitoring Well AMW-03A at an estimated concentration of 116 µg/L, in Monitoring Well AMW-04 at an estimated concentration of 73.5 µg/L, in Monitoring Well AMW-06 at an estimated concentration of 59.5 µg/L, in Monitoring Well AMW-08 at an estimated concentration of 92.1 µg/L, and in Monitoring Well AMW-10 at an estimated concentration of 58.9 µg/L. These concentrations are less than the HRL.

Diesel Range Organics and Gasoline Range Organics

DRO was detected in Monitoring Well AMW-01 at a concentration of 1.1 µg/L, in Monitoring Well AMW-02 at a concentration of 0.87 µg/L, in Monitoring Well AMW-03A at a concentration of 0.48 µg/L, in Monitoring Well AMW-04 at a concentration of 1.2 µg/L, in Monitoring Well AMW-06 at a concentration of 0.69 µg/L, in Monitoring Well AMW-08 at a concentration of 0.13 µg/L, in Monitoring Well AMW-09 at a concentration of 1.4 µg/L, and in Monitoring Well AMW-10 at an estimated concentration of 0.072 µg/L. There is no HRL established for DRO.

Analytical Results – St. Peter Sandstone

St. Peter Sandstone Monitoring Wells AMW-03B and AMW-05B were sampled and analyzed for VOCs, SVOCS, RCRA metals (dissolved), PCBs, DRO, and GRO.

Monitoring Well AMW-07 was sampled for free cyanide, in addition to the above listed constituents. Figure 5 highlights the constituents exceeding the HRLs, along with their detected concentrations in individual wells from the past four sampling events (July 2007, December 2007, March 2008, and September 2008).

Total PCBs was detected at concentrations that exceeded the HRL in the St. Peter Sandstone groundwater samples from Monitoring Wells AMW-05B and AMW-07 collected during this sampling event. The following text summarizes the analytes that were detected.

Volatile Organic Compounds

Carbon disulfide was detected in Monitoring Well AMW-05B at an estimated concentration of 0.95 µg/L, which is less than the HRL.

Methylene chloride was detected in Monitoring Well AMW-03B at a concentration of 4.3 µg/L and in Monitoring Well AMW-05B at an estimated concentration of 0.72 µg/L. These concentrations are less than the HRL.

Tetrachloroethene was detected in Monitoring Well AMW-03B at a concentration of 3.2 µg/L and in Monitoring Well AMW-05B at a concentration of 3.7 µg/L. These concentrations are less than the HRL.

Trichloroethene was detected in Monitoring Well AMW-7 at an estimated concentration of 0.43 µg/L, which is less than the HRL.

Semi-Volatile Organic Compounds

The constituent caprolactam was detected in Monitoring Well AMW-03B at an estimated concentration of 1.5 µg/L. There is no HRL established for this constituent.

Polychlorinated Biphenyls

Total PCBs (consisting entirely of Aroclor 1254) were detected in Monitoring Well AMW-05B at a concentration of 0.97 µg/L. Total PCBs (consisting entirely of Aroclor 1260) were detected in Monitoring Well AMW-07 at an estimated concentration of 0.059 µg/L. These concentrations exceed the HRL for total PCBs of 0.04 µg/L.

Resource Conservation and Recovery Act Metals (Dissolved)

Barium was detected in Monitoring Well AMW-03B at an estimated concentration of 79.1 µg/L, in Monitoring Well AMW-05B at an estimated concentration of 61.9 µg/L, and in Monitoring Well AMW-07 at an estimated concentration of 29.2 µg/L. These concentrations are less than the HRL.

Cadmium was detected in Monitoring Well AMW-07 at an estimated concentration of 0.99 µg/L, which is less than the HRL.

Diesel Range Organics and Gasoline Range Organics

DRO was detected in Monitoring Well AMW-05B at a concentration of 0.029 µg/L and in Monitoring Well AMW-07 at a concentration of 0.21 µg/L. There is no HRL established for DRO.

Underground Storage Tank Site Monitoring Results

The UST collection system analytical results were compared to the HRLs. The laboratory analyses of the UST collection system sample detected 1,2,4-trimethylbenzene; 1,3,5-trimethylbenzene; ethylbenzene; methyl isobutyl ketone; methylene chloride; naphthalene; toluene; and xylenes. The concentrations of the five constituents (ethylbenzene, methyl isobutyl ketone, naphthalene, toluene, and xylenes) detected exceed their respective HRL. The UST collection system analytical results are summarized in Table 6. The laboratory analytical reports are provided in Appendix B.

Summary

Unconsolidated Soils Perched Groundwater

Monitoring Wells MW-4, MW-5, and MW-6 are completed into the perched groundwater within the unconsolidated formation. During the September 2008 sampling event, the monitoring wells did not produce sufficient groundwater volume to collect the full suite of analytical parameters. Groundwater samples collected from Monitoring Well MW-4, MW-5 and MW-6 did not contain constituents at concentrations that exceed the HRLs during the sampling event.

Platteville Limestone

The wells screened in the Platteville Limestone (AMW-01, AMW-02, AMW-03A, AMW-04, AMW-06, AMW-08, AMW-09, and AMW-10) did not contain constituents at concentrations that exceed the HRLs during this sampling event.

St. Peter Sandstone

Monitoring Wells AMW-03B, AMW-05B, and AMW-07 are screened in the St. Peter Sandstone. Monitoring Well AMW-03B did not contain constituents at concentrations that exceed the HRLs during this sampling event, the March 2008 sampling event, or the December 2007 sampling event.

Total PCBs were detected at concentrations that exceed the HRLs at Monitoring Wells AMW-05B and AMW-07 during the September 2008 sampling event. PCBs had not been detected in any of the previous sampling events.

No other constituents were detected above the HRLs at Monitoring Wells AMW-05B and AMW-07 during the September 2008 sampling event.

Potentiometric head levels measured during this monitoring event were consistent with historical measurements, with the projected direction of groundwater flow generally to the west.

Underground Storage Tank Site Monitoring

Four constituents (ethylbenzene, methyl isobutyl ketone, methylene chloride, and toluene) were detected at concentrations that exceed the HRLs during the UST collection system monitoring event in September 2008. The concentrations of the constituents detected were similar to the concentrations detected during previous monitoring events.

Conclusion

Total PCBs were detected at concentrations that exceed the HRLs in the groundwater samples collected during this sampling event. After four rounds of groundwater sampling at the site, this was the first time PCBs were detected. No other constituents were detected at concentrations that exceeded the HRLs during this sampling event.

The next sampling event of the UST collection system is scheduled for summer 2009.

A total of four rounds of groundwater monitoring have been performed at the site. As Ford is continuing to operate the plant and intends to for several more years, it is recommended that the site groundwater monitoring program will be discontinued until the plant is permanently shut down. Following shutdown, river and seep sampling will be reevaluated and groundwater.

We appreciate your assistance with this project. If you have questions or need additional information, please call Bryan Zinda of ARCADIS at your convenience.

Table 5. Summary of Compounds Detected in Groundwater Sampling Events
Twin Cities Assembly Plant, St. Paul, Minnesota

Notes:

Results are reported in micrograms per liter ($\mu\text{g/L}$), unless otherwise noted.

AMW ARCADIS Monitoring Well.

mg/L Milligrams per liter.

NA Not analyzed.

NS No standard.

J Estimated result.

 Value is above the Minnesota Department of Health (MDH) Health Risk Limits (HRLs) and United States Environmental Protection Agency (USEPA) Maximum Contaminant Levels (MCLs).

DUP Duplicate.

VOCs Volatile organic compounds.

SVOCs Semi-volatile organic compounds.

MEK Methyl ethyl ketone.

¹ Standard is for total polychlorinated biphenyls.

Project Ford St. Paul Project No. MN000593.0001 Page 1 of 1
 Site Location St. Paul, MN Date 9/16/08
 Site/Well No. MW-4 Replicate No. _____ Code No. _____
 Weather Sunny 60's Sampling Time: Begin 10:15 End 10:26

Evacuation Data		Field Parameters	
Measuring Point	<u>North Edge TOC</u>	Color	<u>Clear</u>
MP Elevation (ft)	<u>833.66</u>	Odor	<u>No Odor</u>
Land Surface Elevation (ft)	<u>830.73</u>	Appearance	<u>clear</u>
Sounded Well Depth (ft bmp)	<u>8.17</u> <u>9/16/08</u>	pH (s.u.)	<u>NR</u>
Depth to Water (ft bmp)	<u>7.74</u>	Conductivity (mS/cm)	<u>NR</u>
Water-Level Elevation (ft)	_____	(μ mhos/cm)	<u>NR</u>
Water Column in Well (ft)	<u>0.43</u>	Turbidity (NTU)	<u>--</u>
Casing Diameter/Type	<u>2" Black Steel/Stick Up</u>	Temperature ($^{\circ}$ C)	<u>NR</u>
Gallons in Well	<u>0.1</u>	Dissolved Oxygen (mg/L)	<u>NR</u>
Gallons Pumped/Bailed Prior to Sampling	<u>0.5</u> <u>dry twice</u>	ORP (mV)	<u>NR</u>
Sample Pump intake Setting (ft bmp)	<u>--</u>	Sampling Method	<u>Grab</u>
Purge Time	begin _____ end _____	Remarks	<u>No readings collected</u> <u>insufficient sample volume</u> <u>VOC + GRO only parameters collected</u>
Pumping Rate (gpm)	<u>--</u>		
Evacuation Method	_____		

Constituents Sampled	Container Description	Number	Preservative
VOC 465F Method 8260	<u>40 mL VOA</u>	<u>3</u>	<u>HCl</u>
SVOO Method 8270	<u>1L Amber</u>	<u>2</u>	<u>None</u>
RCRA Metals (Method 6010) Dissolved	<u>500 mL Plastic</u>	<u>1</u>	<u>HNO₃</u>
PCBs (Method 8082)	<u>1L Amber</u>	<u>2</u>	<u>None</u>
<u>GRO</u>	<u>40 mL VOA</u>	<u>3</u>	<u>HCl</u>

Sampling Personnel Melissa Meeuwsen

Well Casing Volumes				
Gal./Ft.	<u>1-1/4" = 0.06</u>	<u>2" = 0.16</u>	<u>3" = 0.37</u>	<u>4" = 0.65</u>
