

2014
City of Saint Paul Bicycle and Pedestrian Count Report

December 31st, 2014

In September of 2014 the City of Saint Paul Department of Public Works conducted a bicycle and pedestrian count. With the help of 45 volunteers, bicycle and pedestrian data was manually tabulated for 88 screen lines at 43 count sites throughout the city. The counts were performed mid-week from 4:00-6:00 pm during the second week of September. To analyze changes in annual rates of walking and bicycling, 33 count locations measured in 2013 were measured again in 2014.

## Key Findings

## Top 2014 Bicycling Locations

(Location totals reflect tabulated 2-hour peak counts)

1. Marshall Ave Bridge (347)
2. Ford Parkway Bridge (249)
3. Summit Ave east of Fairview Ave (232)
4. Mississippi River Blvd south of Jefferson (217)
5. U of M Transitway west of Energy Park Dr (192)
6. Marshall Ave west of Cleveland Ave (150)
7. Summit Ave east of Dale St (120)
8. Summit Ave east of Western (119)
9. Raymond Ave south of Como Ave (86)
10. Energy Park Dr southwest of U of M Transitway (79)

## Top 2014 Walking Locations

(Location totals reflect tabulated 2-hour peak counts)

1. Lexington Pkwy south of Como Lake $\operatorname{Dr}$ (280)
2. Mississippi River Blvd south of Jefferson (199)
3. Marshall Ave Bridge (186)
4. Summit Ave east of Dale St (169)
5. Summit Ave east of Fairview (160)
6. Kellogg Blvd east of Broadway Ave (156)
7. Dale St north of Charles Ave (129)
8. Wabasha St Bridge (124)
9. Broadway Ave north of Kellogg Blvd (121)
10. Summit Ave east of Western Ave (111)

Top 2014 Total Non-Motorized Locations (Bicycle + Pedestrian Counts)
(Location totals reflect tabulated 2-hour peak counts)

## Contact Info

For questions or additional information about this report, contact Luke Hanson at 651-266-6146 or luke.hanson@ci.stpaul.mn.us

## Sidewalk Riding

Bicyclists riding on sidewalks were measured and tabulated at each of the count locations. Locations with off-street trail facilities were recorded separately and not tabulated as sidewalks. The presence of dedicated bicycle facilities (off-street paths, bike lanes, bike boulevards, and enhanced shared lanes) corresponds with a smaller percentage of sidewalk riding.

- Overall, 14\% of bicyclists counted in 2014 rode on sidewalks.
- Locations without any bicycle facilites recorded the highest percentage of sidewalk riding (28\%).
- Locations with off-street paths recorded the lowest percentage of sidewalk riding (7\%).

Figure 1 - Percentage of Bicyclists Riding on Sidewalks by Bicycle Facilty Type*

*(These figures exclude bridge locations where off-street paths feed directly onto sidewalk facilities)

Figure 2 - Bicycle Traffic at 5 Select Locations, 2007-2014*
(Location totals reflect tabulated 2-hour peak counts)

[^0]
## Why Measure Non-Motorized Traffic?

Counts are conducted to better understand the distribution of non-motorized traffic in Saint Paul and to measure annual changes in rates of walking and bicycling. The data collected from the counts is utilized in the following ways:

- To gain a more complete understanding of non-motorized traffic and behavior in Saint Paul.
- To understand where and how bicyclists and pedestrians travel throughout the City.
- To identify how bicycle and pedestrian traffic changes over time and in response to investments in infrastructure.
- To allow the City to make better-informed decisions on future infrastructure and safety investments for non-motorized transportation.

## Measuring and Methodology

## Manual Field Counts

To measure and record non-motorized traffic, Public Works utilized manual field counts conducted by volunteers at designated locations throughout the city. These counts were conducted from 4-6:00 pm to capture 'peak hour' traffic and were administered mid-week during the second week in September.

Manual field counts utilize an imaginary screen line drawn across the street and abutting sidewalks or paths. Bicyclists and pedestrians crossing the screen line are recorded. Emphasis is placed on recording individuals rather than the number of actual bicycles (i.e., two individuals riding a tandem bicycle would be recorded as two bicyclists). Individuals using assistive devices, such as a stroller or skateboard, are also tabulated and are recorded as pedestrians.

This model is consistent with other bicycle and pedestrian counts and reflects the methodology promoted by the National Bicycle \& Pedestrian Documentation Project ${ }^{1}$. While an adjustment factor is sometimes utilized to extrapolate peak count data to estimate daily traffic counts, in the absence of long-duration count data to verify extrapolation factors, this report reflects only raw two-hour peak counts.

[^1]
## Count Locations

Public Works identified count locations representing a diversity of walking and bicycling environments throughout Saint Paul. With the aim of better understanding where and how bicyclists and pedestrians travel throughout the city, care was taken to select locations near existing bicycle and pedestrian infrastructure to measure utilization and guide future non-motorized infrastructure investments.

Volunteers captured screen line data at 43 locations, recording information for multiple screen lines at most sites. The number of participating volunteers determined the number of locations counted. In most cases, volunteers were asked to collect data at locations identified by Public Works. However, effort was taken to accommodate volunteers who were limited to locations near their work or homes, resulting in geographic disparity in the locations counted.

Also reflected in this report are bicycle and pedestrian counts performed by the Minneapolis Public Works Department (MPW), the Mississippi National River and Recreational Area (MNRRA), and Transit for Livable Communities (TLC). From 2007 to 2013, TLC has conducted annual bicycle and pedestrian counts throughout the Twin Cities, including six locations in Saint Paul. TLC counts were conducted as part of the Bike Walk Twin Cities federal Nonmotorized Transportation Pilot Program. The data from these counts are included in the 'Complete Bicycle and Pedestrian Count Data' section of this report.

## Weather

The majority of 2014 counts were performed on Tuesday, September 9th, from 4:00-6:00 pm. Weather conditions for the 9th recorded a high of 75 degrees, overcast conditions, wind gusts up to 21 mph , and precipitation totaling 0.18 inches. There was no precipitation recorded during the 4:00-6:00 pm counting period, but rain and thunderstorms were forecasted for the evening following the counts. While the direct relationship between forecasted weather and rates of walking and bicycling remains inconclusive, adverse weather conditions have been established as having a significant impact on recorded rates of non-motorized traffic${ }^{2}$. It is reasonable to infer that the threat of inclement weather on September 9th influenced the recorded rates of walking and bicycling.

## 2013-2014 Changes in Non-Motorized Traffic

33 Count locations measuring 55 screen lines were counted in both 2013 and 2014. While the data records a decrease in non-motorized traffic in 2014 (a decrease of $7 \%$ in bicycling and $2 \%$ in walking), the data is too limited to infer an overall reduction in non-motorized traffic in 2014. Instead, this decrease is likely reflective of the threat of inclement weather on September 9th, 2014 (the primary day of data collection).

## City of Saint Paul Bicycle and Pedestrian Count Form

Name: $\qquad$ Date: $\qquad$
Screen Line Location (see attached map): $\qquad$
Start time: $\qquad$ End time: $\qquad$
Weather (temperature/conditions): $\qquad$

## Instructions:

- Count all bicyclists and pedestrians crossing your screen line.
- A person crossing both screen lines is counted once on each sheet.
- A person passing through an intersection without crossing a screen line is not counted.
- Use tally marks in groups of 5 to indicate each bicyclist or pedestrian ( $4=\|\mid\|, 5=廿 \mathrm{H}$ ).
- Count the number of people bicycling, rather than the number of bicycles.
- If issues arise (distractions, traffic) and you lose track, make a note on the back of this sheet.

|  | Bicyclists |  |  | Pedestrians |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Time | Street | Trail | Sidewalk | Walking | Assisted ${ }^{1}$ |
| 4:00-4:15 |  |  |  |  |  |
| 4:15-4:30 |  |  |  |  |  |
| 4:30-4:45 |  |  |  |  |  |
| 4:45-5:00 |  |  |  |  |  |
| 5:00-5:15 |  |  |  |  |  |

| 5:30-5:45 |  |  |  |  |  |
| 5:45-6:00 |  |  |  |  |  |
| Total |  |  |  |  |  |

1
Includes individuals using wheelchairs, skateboards, roller blades or other devices. Someone riding a bicycle is a
bicyclist, someone walking a bicycle is a pedestrian.
