

**“WHAT TO EXPECT DURING SEWER REHABILITATION”
CITY OF ST PAUL SEWER LINING PROJECT**

The City of St Paul needs to rehabilitate the sanitary sewer that serves your property. Instead of digging up the street and installing a new sewer pipe, the sewer will be repaired by installing a pipe liner within the existing sewer. **There is no assessment to property owners for this work.** The cost of this work is funded by your sewer usage fees.

What you need to do:

- Watch for notification from contractor via door hanger, telephone, or face to face.
- Property owners and/or building managers: please distribute this notification postcard.
- Adhere to parking restrictions and temporary traffic control measures.
- On the day of sewer lining:
 - o Your sewer service will be blocked and out of service.
 - o Please pour one gallon of water into all floor drains to restrict potential odors.
 - o Please don't use water. Water usage will cause your sewer to back-up.
- If you smell a glue-like odor inside your house and/or experience sewer problems, contact the City Inspector.
- If your property isn't indicated on this postcard, you can use water but it's still advised to pour water in your drains.

What the contractor will do:

- Mobilize equipment, restrict parking, and install temporary traffic control measures.
- Clean the sewer and rehabilitate it by installing a sewer liner.
- Notify you one week prior to blocking off your sewer service.
- Notify you one day prior to blocking off your sewer service.
- Block off your sewer service on the day of sewer lining.
