

Saint Paul Minnesota

Soccer Stadium Development Site

FACT SHEET: Constructing Community at Allianz Field

The historic construction of Allianz Field, by the numbers

The City of Saint Paul supports developments like Allianz Field to ensure our city works for our families, businesses, and cultural communities for years to come. For the new soccer stadium, those efforts began with the construction of the stadium itself, and will continue with new opportunities for community businesses around Allianz Field.

JOB CREATION & LOCAL BUSINESS

Over 20 months of construction on the \$250 million, privately-funded Allianz Field, more than 650,000 hours of on-site work went into the project. The project is believed to be the largest private building project to have ever taken place in the City of Saint Paul.

The 650,000 hours of work were completed by 2,020 individual craft workers, more than 90 percent was performed by local contractors. Further, 33 percent of work hours were performed by craft workers of color and 11 percent by women.

This privately-funded stadium has not received any public subsidies, but the City of Saint Paul has made investments to upgrade pedestrian facilities, roads, stormwater systems, and other public facilities on the soccer stadium development site.

Public investments have helped drive local job creation around the stadium, including requirements that prioritize diverse and local hiring for infrastructure projects.

These investments will serve not only soccer fans, but neighbors, businesses, commuter, and visitors around the Snelling-Midway area.
