May 11, 2015

Dear Third Street Resident:

A street improvement project is scheduled for your neighborhood this construction season. This letter is a pre-construction informational letter. Public Works has not yet determined which contractor will be performing the roadway construction work. Another letter with that and other additional information will be sent when the contractor has been determined.

Xcel Energy will have crews working in the project area (see map) prior to the start of the roadway reconstruction work. Xcel Energy's work consists of upgrading gas distribution systems. This utility work will cause disruption and inconvenience to residents. Holes will be dug in the street and in the sidewalk to accomplish the utility work. This utility work moves quickly, so the excavations are open for a short time. Panels of sidewalk removed for this work will be restored by the Street Construction contractor.

When the contractor starts the project, he will install new water main, and replace lead water services with new copper service lines. The lead service replacement work consists of a trench excavated from the water main in the street to the property line. Should the water service from the property line to the home be a lead pipe, it is up to the homeowner to coordinate that pipe replacement if they so wish. This private work must be done by hiring a licensed plumber. Additional information regarding that pipe work will be furnished by Saint Paul Regional Water Services.

If you have any landscaping items within the public right of way (R.O.W.), or the boulevard area such as special outwalks (concrete, stone, brick, etc.), plantings, or sprinkler systems that you would like to save, we suggest removing them as soon as possible and storing them until the boulevard grading, sodding, and sidewalk work has been completed. Anything left in the R.O.W. or boulevard will be removed and disposed of by the contractor. Sprinkler systems should be removed in the R.O.W. or boulevard area and, where there is no sidewalk, removed two to three feet behind the R.O.W. or city property line.

The Street Construction division will make every effort to keep you informed of all aspects of work on this project.

If you have questions you may contact me at the number listed below, Scott Brimer the project supervisor at 651-266-6225, or **Jamie Heiden the project inspector at office 651-266-6127 or cell 651-755-0115**. Once the project starts, Jamie will be in contact with the contractor on a daily basis and is the most up-to-date on current project information.

Thank you,

Barb Mundahl
Project Engineer
