

Sanitary Sewer Work in Your Neighborhood in April 2026: Sanitary Sewer Pipe Lining Project

March 23, 2026

Dear Saint Paul resident, business, and/or property owner,

The Saint Paul Public Works Sewer Utility will be doing work to rehabilitate the sanitary sewer that serves your neighborhood. The sanitary sewer will be repaired by installing a new pipe liner inside the existing sewer line.

What is happening?

The City of Saint Paul has hired Insituform to do the pipelining work. During the work, the contractor will have equipment on site, post no parking signs, and have temporary traffic control measures in place.

Sewer liner construction is done without excavation by accessing the sanitary sewer through the existing utility covers (manholes) in the street. To learn more about the pipelining process, visit the project webpage at stpaul.gov/SewerLining.

When is it happening?

The pipelining work in your neighborhood will occur in April 2026. **If your house, business, or property will be directly impacted by the sewer pipelining, you will receive two notifications—one about a week before the work occurs and one the day before and/or day the work occurs.** Notices may be placed on your front door.

If your house, business, or property is in the surrounding area, but will not be directly impacted by the work, you will not receive any additional notifications or information.

Where is the work happening?

Chatsworth Street between Marshall Avenue and Dayton Avenue (Ward 1)

Ivy Avenue between Galtier Street and Marion Street (Ward 5)

Geranium Avenue between Abell Street and Jackson Street (Ward 5)

Hatch Avenue between Park Street and Sylvan Street (Ward 5)

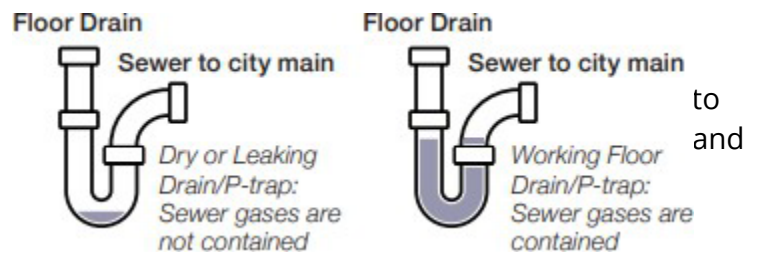

What you need to do in advance of the work

- Watch for notifications from the contractor—check your front door.
- Prepare in advance for impacts to your home or business and the use of your sanitary sewer. Impacted properties will not be able to flush toilets, shower, wash dishes, do laundry, or run water down their drains. **Sewer use will be restricted from 8 a.m. to 6 p.m. on the day work is occurring on your block.** The contractor will notify you shortly before work starts and when work is completed and you can use your sewer line again.
- Check the to the project website to see the updated schedule and find out when the contractor will be working in your neighborhood. Visit stpaul.gov/SewerLining.
- Please share this sewer lining information with renters, tenants, employees, and visitors to your property.
- Follow all posted signs, including no parking signs. No parking signs will be posted at least 24 hours in advance of this work.

What you need to do/know during the sewer lining work in your neighborhood

- If your sewer pipe is being lined your sewer service will be blocked and temporarily out of service during active work. You will be notified about this temporary service disruption shortly before work starts and when work is completed.
- All properties receiving this letter, should pour one gallon of water into all floor drains (typically located in the basement) restrict potential odors. See image at left learn more about floor drains at stpaul.gov/SewerLining.
- If your property is impacted, restrict water usage, including flushing the toilet, showering, running the dishwasher or washing machine, and running water down the drain during your scheduled sewer lining day. Too much water usage during this work will cause your sewer to backup into your property.
- If you notice a strong glue-like odor inside your property or experience any sewer problems, contact Insituform Field Engineer Bruce White at 612-225-0041 or Sewer Utility Project Engineer Amy Scherer Honigs at 651-266-9720

What is the cost?

There is no cost to property owners. The project is funded by the Sewer Utility.

Questions and more information

To view more information about pipelining, visit stpaul.gov/SewerLining.

For a larger map of the sewer pipelining schedule and more information for impacted businesses, visit stpaul.gov/GrandAvenue.

For questions about the work or issues during the pipelining, contact Amy Scherer Honigs at 651-266-9720 or Amy.Scherer.Honigs@ci.stpaul.mn.us.

Sincerely,
Saint Paul Sewer Utility
