Earl Street Reconstruction Project

Minnehaha Avenue to Maryland Avenue (Phase 1)

SAINT PAUL
MINNESOTA

Project Details

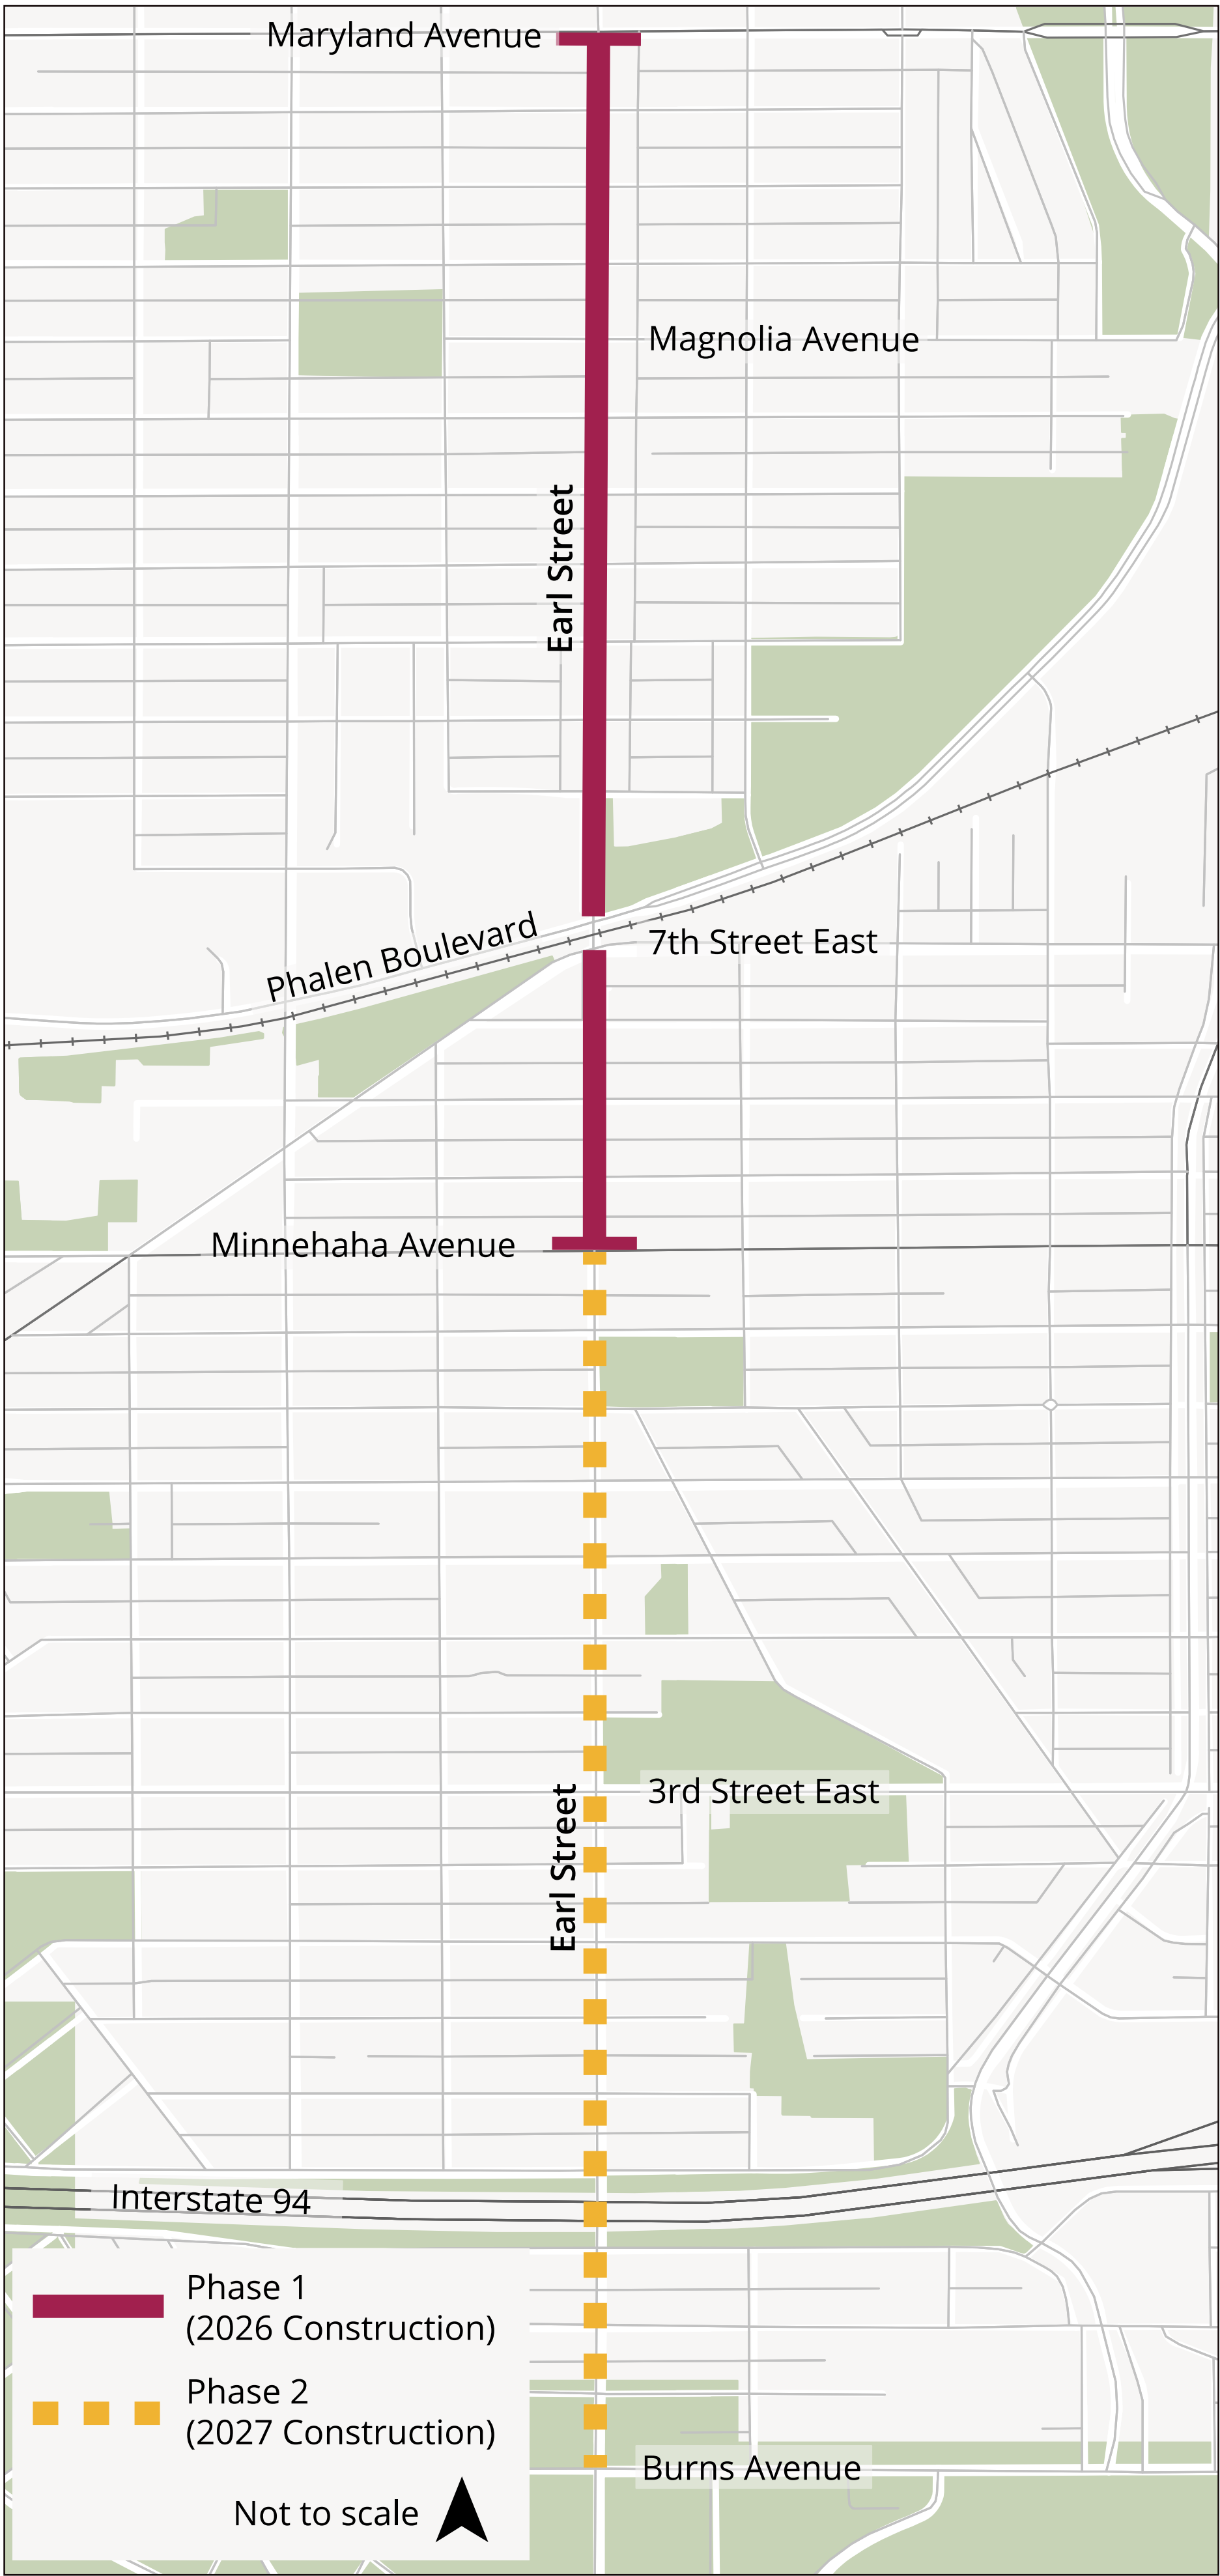

The City of Saint Paul Public Works Department is reconstructing approximately one mile of Earl Street between Minnehaha Avenue and Maryland Avenue. This street segment is located east of Arcade Street running over Phalen Boulevard and the railroad.

Improvements to Earl Street will include:

- A repaired two-lane street
- A repaired sidewalk on both sides of the street
- New bike facilities
- New lighting
- New signs and street striping
- Improved sewer and water connections
- Median islands at three locations

Project Goals:

-  Improve the pavement quality and repair the damaged street
-  Create safer travel for people walking, biking, and driving along Earl Street
-  Improve drainage and storm-water treatment
-  Preserve mature boulevard trees wherever possible

Project Funding:

The total estimated cost of the project is \$13.92 million. The project is funded by a 1% local option sales tax called Common Cent, as well as utility funds and assessments. Assessments are levied to benefiting property owners adjacent to the project and are verified by a special benefit analysis provide by an independent appraiser. These property owners will receive a separate letter with their estimated assessment.

Tree Removal and Preservation

Preserving the tree canopy is a City priority and a priority to many in the neighborhood. The on-street bike lane design will result in the removal of approximately 32 trees and the planting of 46 trees. The off-street trail option would have resulted in the removal and replacement of approximately 77 trees.

Tree removal will be completed by March 31st due to endangered species habitat regulations. Additional trees may need to be removed during construction, only approved by a Certified Urban Arborist with approved findings.

Project Funding

The total estimated cost of the project is \$13.92 million. The project is funded by two primary sources:

Common Cent Sales Tax

This 1% local option sales tax was approved in 2023 by Saint Paul voters and will fund the majority of the reconstruction cost.

Assessments to Property Owners

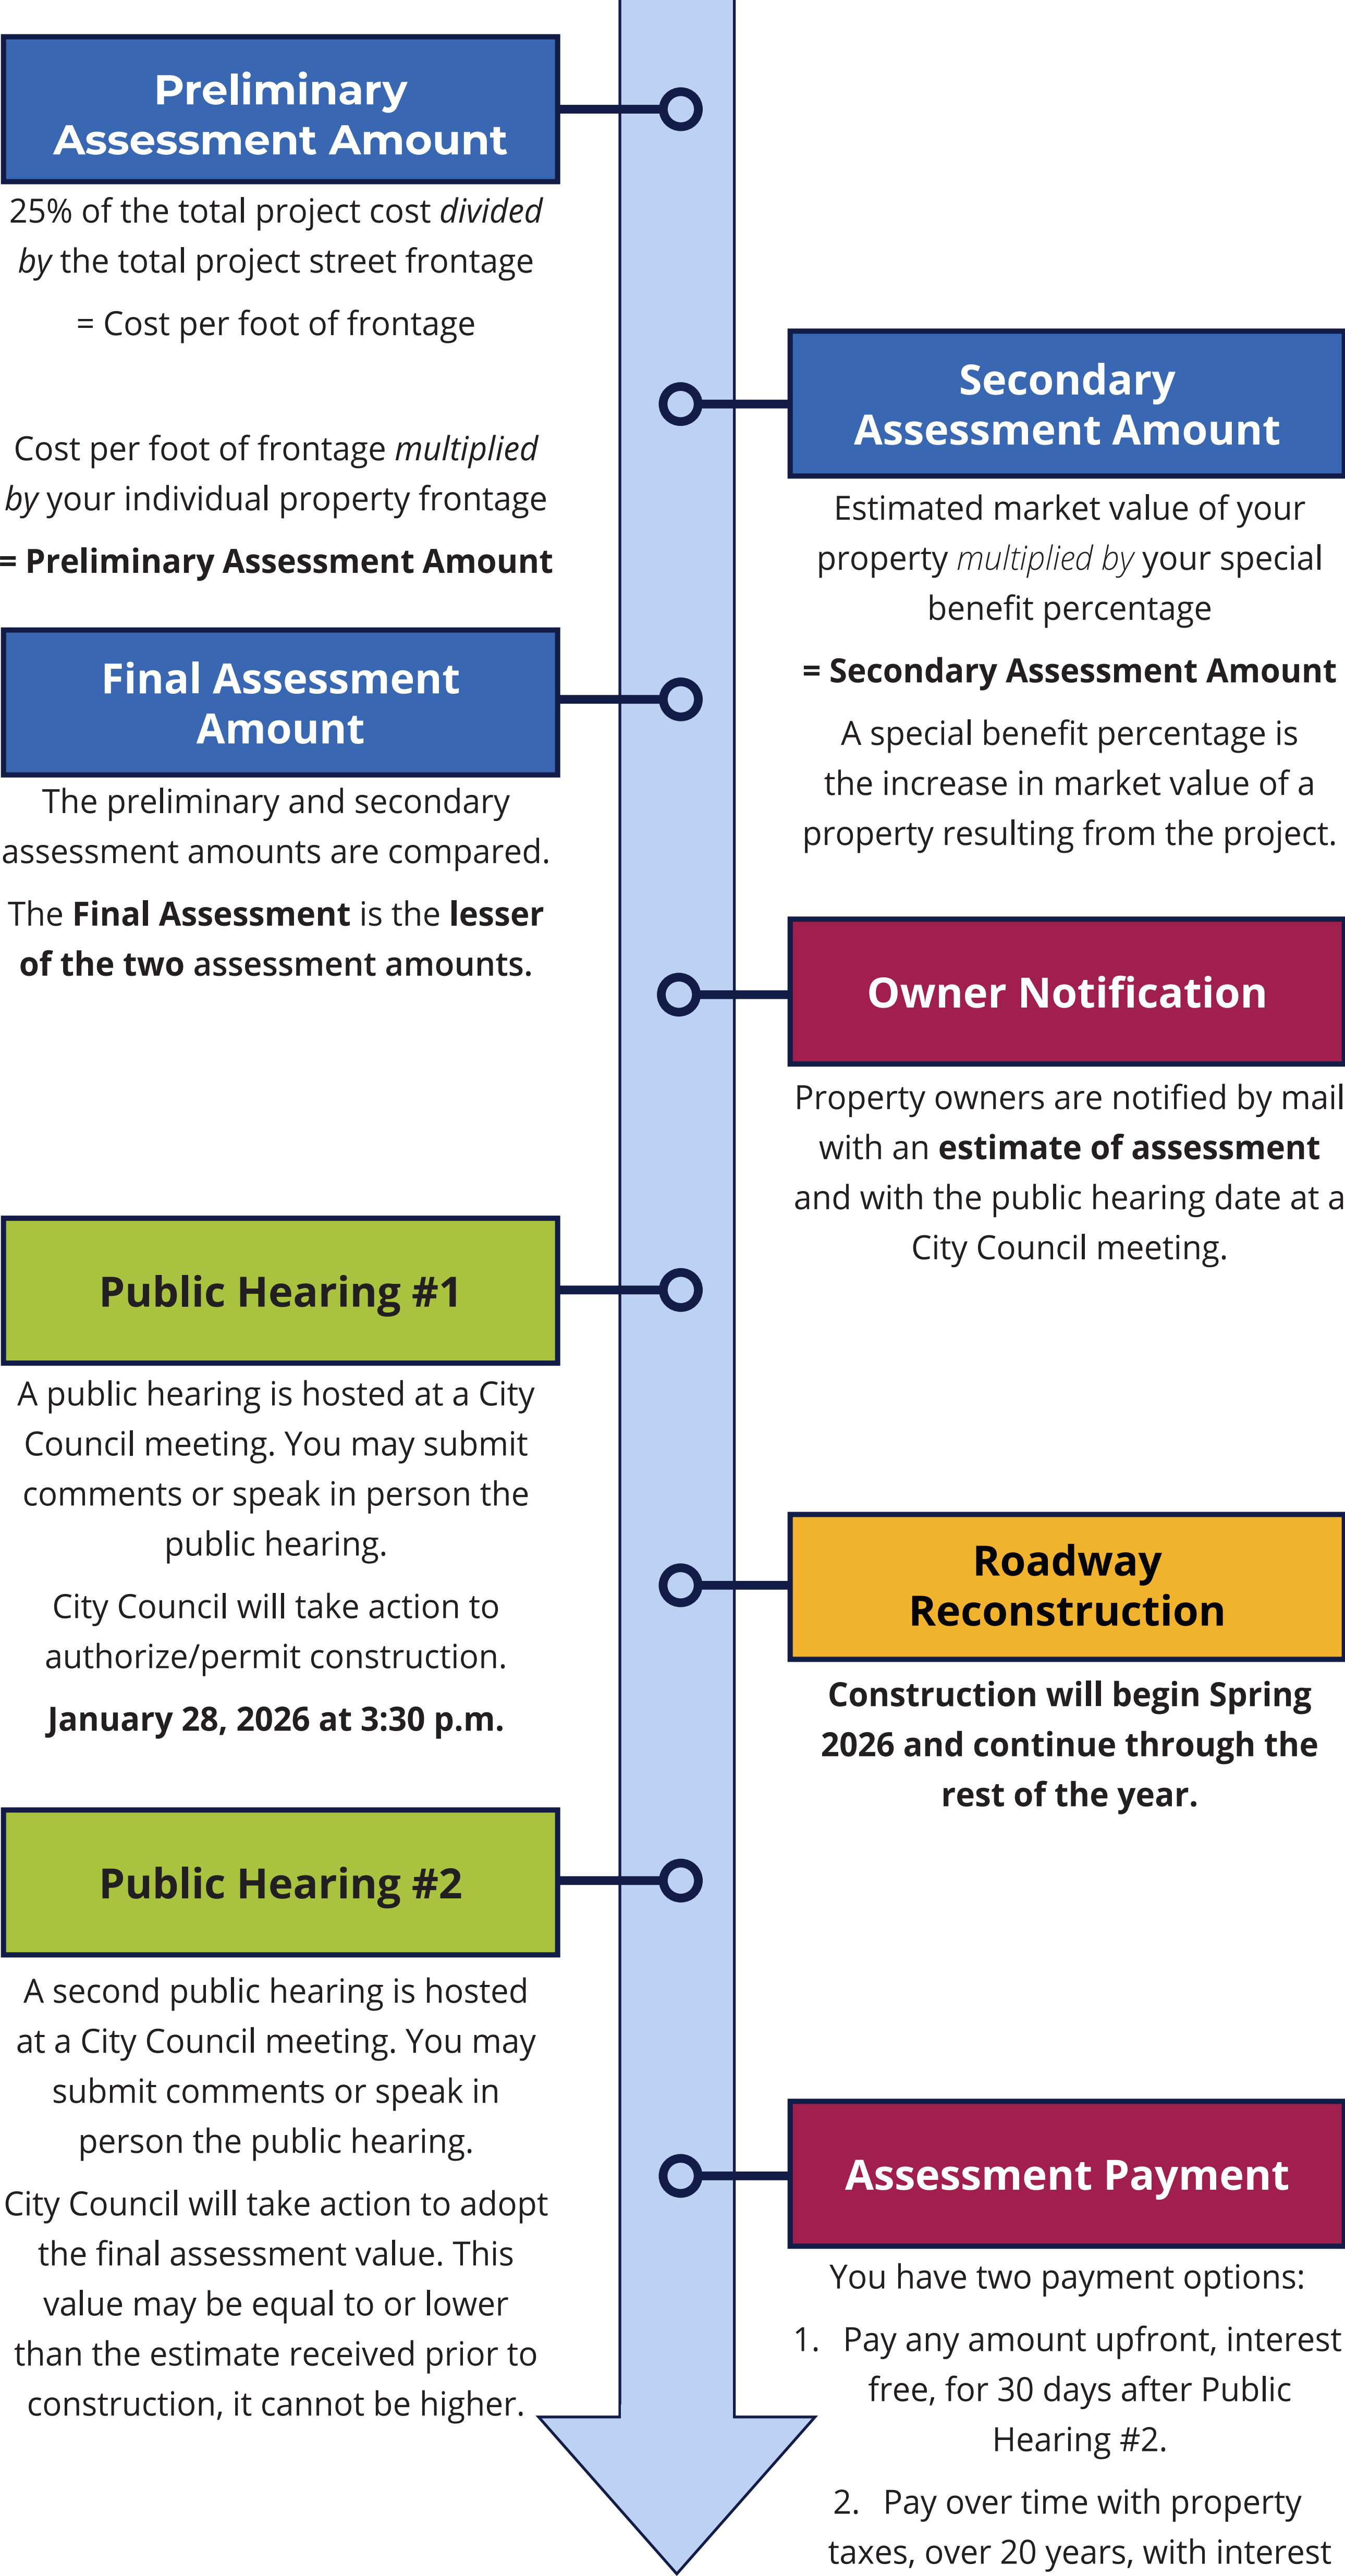

Assessments are levied to benefiting property owners adjacent to the project and are verified by a special benefit analysis provide by an independent appraiser. These property owners will receive a separate letter with their estimated assessment.

The Saint Paul City Council will approve the Phase 1 Earl Street Project at a public hearing on Wednesday, January 28, 2026 at 3:30 p.m. at City Hall. Construction will begin in Spring 2026 and continue through the rest of the year.

What is a special assessment?

A special assessment is a charge imposed on real property (land and buildings) to help pay for a public improvement that benefits the property. The City is authorized by state law and city charter and ordinances to use special assessments to finance public improvement projects. Special assessments typically help pay for street reconstruction, mill and overlay (resurfacing), sanitary and storm sewer construction, sidewalks, alleys, and other public improvements

If your property has no direct frontage to Earl Street, you will not be required to pay for any portion of the project through assessments.

Median Islands

The City plans to construct median islands on Earl Street at the intersections of Jessamine Avenue, Cook Avenue, and Bush Avenue.

Median islands make it easier and more comfortable for pedestrians and cyclists to cross the street and encourage safer driving speeds by narrowing the visual width of the roadway. The medians will restrict vehicle movements at the intersections, including left turns and east-west access across Earl Street.

Median Island Features

Median islands will be 8 feet wide and made of concrete. They will include a pedestrian crossing, and signage will be posted to prohibit vehicles from turning left or crossing Earl Street.

Locations

Median islands will be located at Jessamine Avenue, Cook Avenue, and Bush Avenue. These locations were chosen following state spacing guidelines and in areas with frequent pedestrian crossings.

Safety Benefits

Median islands not only provide a safe refuge for pedestrians and cyclists to wait in the middle of a street while crossing, but also visually narrow the roadway which helps reduce vehicle speed. Limiting left turns in strategic locations improves safety by increasing the predictability of traffic flow. Due to the grid street pattern in this area, limiting access is not expected to have a significant impact on vehicle connectivity.
